Vigenère Cipher

MARTZEL BASTE

encrypting text by using a series of different Caesar ciphers based on the letters of a **keyword**

It is a polyalphabetic cipher based on using successively **shifted alphabets**,

The letters of the keyword determine the shifted alphabets used in the **encoding** process.

The Vigenere Tableau

The *Vigenere Cipher* , proposed by Blaise de Vigenere from the court of Henry III of France in the sixteenth century.

TABLE 2-1 Vigenère Tableau.

	0					5					10					15					20					25

Example

Plaintext: Programmer

Keyword: code

Encrypted:

Consider the following:

Plaintext: Programming is ME.

- Using Caesar Cipher where
- Shift: 13%3 – 2 + 2 ^2 . Find out the ciphertext.

- Using Substitution, what is the ciphertext:

Long Random Number Sequences Vernam Cipher

- A one-time Pad Cipher
- Use Numbers Mod 26 to represent Letters
- Use A two-digit Random Numbers
- Add the two numbers and take Mod 26

Vernam Cipher Example

the letters would first be converted to their numeric equivalents, as shown here.

```
V  E  R  N  A  M  C  I  P  H  E  R
21 4  17 13 0  12 2  8  15 7  4  17
```

Next, we must generate random numbers to combine with the letter codes. Suppose the following series of random two-digit numbers is generated.

```
76 48 16 82 44 03 58 11 60 05 48 88
```

The encoded form of the message is the sum mod 26 of each coded letter with the corresponding random number. The result is then encoded in the usual base-26 alphabet representation.

Plaintext	V	E	R	N	A	M	C	I	P	H	E	R
Numeric Equivalent	21	4	17	13	0	12	2	8	15	7	4	17
+ Random Number	76	48	16	82	44	3	58	11	60	5	48	88
= Sum	97	52	33	95	44	15	60	19	75	12	52	105
= mod 26	19	0	7	17	18	15	8	19	23	12	0	1
Ciphertext	t	a	h	r	s	p	i	t	x	m	a	b

Thus, the message

```
VERNAM CIPHER
```

is encoded as

```
tahrsp itxmab
```
